1.0 Introduction

This document provides basic information for using MERRA-2 Gridded Output products.

The second Modern-Era Retrospective analysis for Research and Applications (MERRA-2) is a NASA atmospheric reanalysis that begins in 1980. It replaces the original MERRA reanalysis (Rienecker et al., 2011) using an upgraded version of the Goddard Earth Observing System Model, Version 5 (GEOS-5) data assimilation system. MERRA-2 includes updates to the model (Molod et al., 2012; 2014) and to the Global Statistical Interpolation (GSI) analysis scheme of Wu et al. (2002). Details of the MERRA-2 system, including major changes from the MERRA system, are detailed in the companion GMAO Office Note No. 10. The major motivation for replacing MERRA with MERRA-2 is the fact that the MERRA data assimilation system was frozen in 2008 and is not capable of ingesting several important new data types: as the older satellite instruments fail, the number of observations available for assimilation in MERRA is decreasing rapidly. MERRA-2 uses GEOS-5, Version 5.12.4, which is able to use the newer microwave sounders and hyperspectral infrared radiance instruments, among other instruments. McCarty et al. (2015) describes the MERRA-2 observing system.

To view specific data set information like file naming convention, temporal and spatial information please visit the [MERRA-2: File Specification document](https://gmao.gsfc.nasa.gov/reanalysis/MERRA-2/docs/) on the GMAO Reanalysis MERRA-2 documentation site (https://gmao.gsfc.nasa.gov/reanalysis/MERRA-2/docs/)

4.0 Options for Reading the Data

4.1 GrADS

The Grid Analysis and Display System (GrADS) is a suite of executable well suited for the visualization of MERRA-2 data. MERRA-2 NetCDF files are self-describing with respect to the netcdf executable and the sdfopen command within the executable.

GrADS Example

The following brief example demonstrates how to open a MERRA-2 tavg1_2d_slv_Nx (M2T1NXSLV) and create an image of cloud top temperatures over the eastern United States.

To open the file for reading type ‘netcdf’ at the system prompt and choose the landscape or portrait mode.

To open a file type the file name at the GrADS prompt (ga->):

```
ga-> sdfopen MERRA2_200.tavg1_2d_slv_Nx.20001231.nc4
```

GrADS will respond with:

```
Scanning self-describing file: MERRA2_200.tavg1_2d_slv_Nx.20001231.nc4
SDF file MERRA2_200.tavg1_2d_slv_Nx.20001231.nc4 is open as file 1
LON set to 0 360
LAT set to -90 90
LEV set to 0 0
Time values set: 2000:12:31:0 2000:12:31:0
```

For a brief description of the file as well as a list of parameters available in the file:

```
ga-> q file
```

File 1 : MERRA2 tavg1_2d_slv_Nx: 2d,1-Hourly,Time-Averaged,Single-Level,Assimilation,Single-Level Diagnostics

To view an image of the Cloud-top temperature (cldtmp):

```
ga-> d cldtmp
Contouring: 200 to 300 interval 10
```

This will create an image of the cloud-top temperatures shown as contours in a separate window.

To create a PNG image of the eastern United States in a file called 'cldtmpUSeast.png':

```
ga-> set lat 30, 45
ga-> set lon -85, -70
ga-> clear
ga->d cldtmp
ga-> printim cldtmpUSeast.png
```

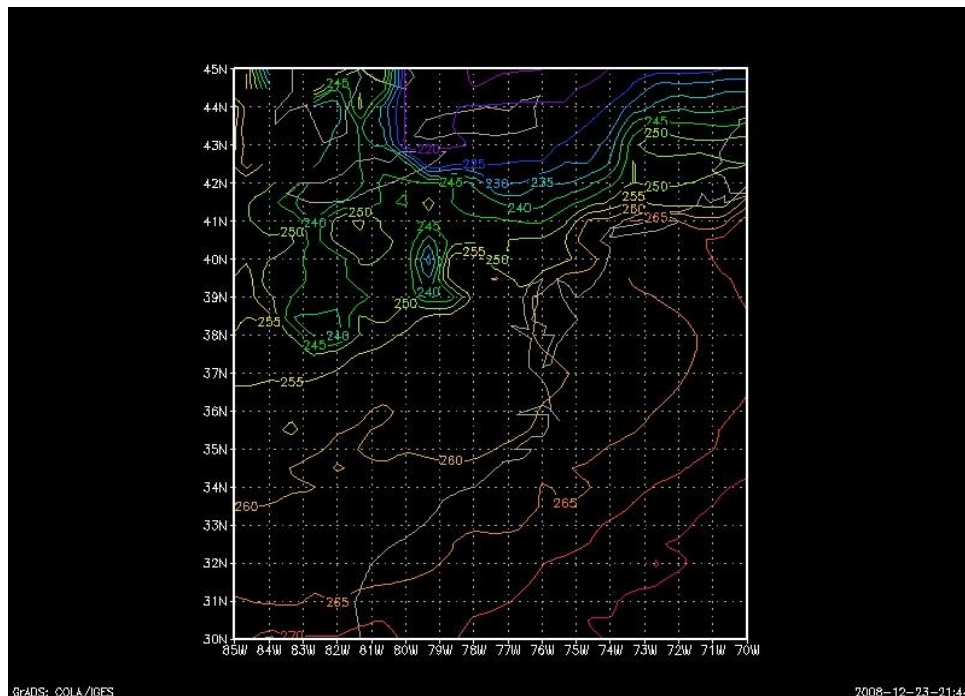

Figure 1 cldtmpUSeast.png

GrADS can do much more than what is demonstrated above, including

- Calculating statistical data from variables
- Plotting and overlaying variables
- Comparing datasets
- Regridding data

For more information on GrADS and download GrADS tools, visit <http://cola.gmu.edu/grads/> .

4.2 ncdump

```
ncdump -h <MERRA-2 file>  
ncdump -v <SDS name> <MERRA-2 file>
```

SDS names are listed in Appendix D and can be obtained from a MERRA-2 file by searching for the string “Variable Name” in the SDS headings, for example:

```
ncdump -h MERRA2_200.tavg1_2d_slv_Nx.20001231.nc4 | grep T2MWET
```

```
Variable Name = CLDPRS  
Variable Name = CLDTMP  
Variable Name = DISPH  
Variable Name = TS  
.....
```

5.0 Data Services

You can begin to familiarize yourself with the MERRA-2 data by visiting the GES DISC:
<https://disc.gsfc.nasa.gov/>

Searching with keyword “**MERRA-2**” and filter the “**Source**” on the left panel to only include “Models/Analyses MERRA-2 . Click on the title of a data collection, you may explore the summary, data citation, and documentation of this data collection.

Subset service: The MERRA-2 subset data service includes the following features:

- subset variable and/or spatial region, and vertical dimensions if a 3-dimensional data
- regrid data to resolutions of many models
- calculate daily mean, min, and max for sub-daily data

Giovanni: online visualization and analysis services (<https://giovanni.gsfc.nasa.gov>)

Web Services: The MERRA-2 Web service includes OPeNDAP, GDS, and TDS

Documentation: under the documentation tab

- Data How-to: step-by-step instruction with screenshot to read and view data. This is under the documentation (<https://disc.gsfc.nasa.gov/information/howto?tags=MERRA>)
